## SIZING CHART FOR BREAST SHAPERS

## CROSS-CUP DIFFERENCE (CCD) METHOD FOR BREAST SHAPER FITTING

This fitting method was designed to help you find the best thickness (Thin, Medium or Volume) for your customers' needs. Which shape is right for her is still based on visual observation during a personal fitting.

The cross-cup is the measured width between the front center of the bra (at her sternum) to the side seam.

1. Measure cross-cup non-surgery side
2. Measure cross-cup surgery side
3. Substract the width of step 2 from the width of step 1
4. Total is the Cross-Cup Difference (CCD)

| CCD MEASUREMENT | TRY |
